Augustine Lopez, CFO, and Philip Katzenberger, Director HIM/Privacy Officer, explained the need for continued credentialed coding service. The current contract is with AMN Healthcare Solutions which is primarily a credentialed coding service with comprehensive health information management (HIM) service resources to meeting operational demands of Salinas Valley Health. AMN Healthcare Solutions has clinical credentialed workforce with services covering coding, clinical documentation integrity (CDI) and revenue integrity (RI) who are skilled to accurately decipher diagnosis/procedures. AMN Healthcare Solutions' competitive edge is their commitment to utilizing only vetted personnel by the client. To ensure quality is upheld, AMN provides an in-depth monthly quality validation report to ensure AMN's services are compliant and unified with SVH's claim submission accuracy requirements and reimbursement guidelines. ER - LOS for Non-Admits in Minutes: Data Criteria: Calculate the median LOS in minutes for ER Outpatients for each month & YTD for cases in ER (excludes inpatients and patients leaving against medical advice or left without being seen.) Maximum is based the FY23 Baseline. The Target is a 3 minute increase from the Max, and the Threshold is a 6 minute increase from the Max. **Rationale:** SVHMC ER has recently experienced a higher volume level, including a surge of patients and provider turnover. According to CMS, the latest available data from 2021 indicates that the State Rate is 196 minutes and the National Rate is 203 minutes for comparable size hospitals.

ER - Time to Admit in Minutes: Data Criteria: Calculate the median time for inpatients from admit decision to time of admission to nursing unit in minutes (includes observation cases). Baseline = Threshold is based on FY 2023 Actuals. The Target is a 2 minute decrease from the Baseline, and the Max is a 4 minute decrease from the Baseline.

Rationale: The ER average daily census is currently averaging at about 186 patients a day compared to the baseline period of 128 (Jul21-Jan22), or a **45%** increase in ER census. We also have continued challenges with COVID and respiratory isolation. The vast increase of volume leads to limited space availability and delays. We have put forth a new initiative called the “Big 5 Handover Process”, which is a streamline handover process between the ED and nursing units, which may reduce admit time.

OR Turnover Time Measurement: Source is from the **PICIS OR Nurse Record**. Calculate minutes elapsed between the wheels out & wheels in of the next case. Only cases where the time difference is less than or equal to 60 minutes will be included because breaks are often scheduled in a day. Due to MD availability, cases that exceed 60 threshold minutes will not count as a turnover. Excludes non-scheduled cases. Measurement applies to cases for the same physician and same room only. Data will be partitioned by actual date rather than previously scheduled date. **National benchmarks range from 25 to 38 minutes.** FY 2024 Goals are set at a level to continue high efficiency performance and strive to maintain sustainability at these levels. Planning to reduce minutes may cause patient safety risks and other concerns, especially considering the Covid-19 ongoing pandemic and the impact it has had in our hospital capacity as well as in our perioperative operations. Additionally, our OPS department has moved over to the other side of the building into 1 Main, which means the nurse, anesthesiologist and surgeon now have to go that distance to interview and mark the patient. While this isn't a huge distance, it can add 1-2 minutes to each start and/or turnover.

Cath Lab Percentage of 1st case On Time Start Time

- Source is from Meditech Community Wide Scheduling for the first case scheduled in each Cath Lab, where the scheduled time is from 7:00 am to 9:00 am

- Anesthesia patients prepped and draped within 60 minutes of scheduled start time as measured by "Patient Ready" note charted in McKesson/CPACS
- *Measurement period is from November 2023 through June 2024.* This is due to adjustments made to the Cath Lab scheduling policy, provider notification and implementation time.

Hospital Acquired Conditions

Source: National Healthcare Safety Network (NHSN) & BD Health Insight Interface

Hospital Acquired Conditions will be measured **quarterly**

Rationale for Targets: Utilizing CMS/NHSN/Magnet benchmarks and last years FY targets for sustainment and ongoing prevention practices. Process improvement measures for Falls, HAPIs, CLABSI, CAUTI, CDI and SSI processes are in place.

- **Falls with injury:** NDNQI Magnet benchmark 0.5- our outcomes in FY2022 and FY2023 are meeting the benchmarks
- **HAPI-** stage 2 and Deep tissue injuries are added to the CMS measures already reported (currently stage 3,4 and unstageable events are reported)- goal expanded. No current benchmark. We have already improved the outcomes in FY 2023 over FY 2021- we are proposing to keep/sustain the current outcomes. Displayed as a rate: number of pressure injuries /over 1000 patient days.
- **CLABSI** (Central Line Associated Bloodstream Infection), Health & Human Services 2023 Goal for CLABSI: SIR <0.50. An HAI Event can create increases above the benchmark SIR due to low utilization. Example: FY Q2 2021 1 CLABSI increased the SIR to 0.63. We will utilize a rate methodology: number of infections/ over 1000 line days – this rate is not risk adjusted like the SIR rate is but it provides us with the ability to display outcome measures after the close of the month instead of waiting from NHSN for benchmarked data. This is important for rapid continuous improvement work.
- **CAUTI** (Catheter Associated Urinary Tract Infection) Health & Human Services 2023 Goal for CAUTI: SIR <0.75. An HAI Event(s) can create increases above the benchmark SIR due to low utilization. Example: FY Q4 2022 1 CAUTI increased the SIR to 0.72 .We will utilize a rate methodology: number of infections/ over 1000 line days – this rate is not risk adjusted like the SIR rate is but it provides us with the ability to display outcome measures after the close of the month instead of waiting from NHSN for benchmarked data.
- **CDI** (Clostridium Difficile Infection), Health & Human Services 2023 Goal for CDI: SIR <0.70. We will utilize a rate methodology: number of infections/ over 1000 patient days – this rate is not risk adjusted like the SIR rate is but it provides us with the ability to display outcome measures after the close of the month instead of waiting from NHSN for benchmarked data.
- **SSI** (Surgical Site Infections), Health and Human Services 2023 Goal for SSI <0.70. We will utilize a rate methodology: number of infections/ over 1000 procedure days – this rate is not risk adjusted like the SIR rate is but it provides us with the ability to display outcome measures after the close of the month instead of waiting from NHSN for benchmarked data.
