In FY24 the Salinas Valley Health cardiac catheterization lab began conducting Percutaneous Transmural Arterial Bypass (PTAB) using the DETOUR System. This minimally invasive intervention treats peripheral arterial disease (PAD) using stents to restore blood flow to the leg as an alternative to an open surgical bypass procedure. Salinas Valley Health was one of only two hospitals in the country selected to participate in the nationwide launch of this intervention, and successfully treated their first two patients in July of 2024.

Salinas Valley Health Cardiac Wellness Center

Our on-campus Cardiac Wellness Center offers a comprehensive cardiac rehabilitation program for individuals recovering from heart-related issues. The program focuses on minimizing physical and emotional impacts, reducing risks of sudden cardiac events, managing symptoms, stabilizing or reversing disease progression, and aiding in the return to daily routines. It includes monitored exercise, nutrition counseling, and resources for cardiac awareness to help patients achieve their best selves.

The Salinas Valley Health Cardiac Wellness Center provides comprehensive cardiac rehabilitation, encompassing monitored exercise, nutrition guidance, and heart education to enhance patient healing and wellbeing.

293

individuals trusted the Salinas Valley Health Cardiac Wellness Center for cardiac rehab in fiscal year 2024.

1,336

patients received specialized inpatient care from our leading cardiology experts.
